

SEED INVESTMENT OPPORTUNITY

DineCore

The Multi-Tenant Operating System for Multi-Location Hospitality

The Multi-Location Dilemma

Legacy POS infrastructure fails modern multi-branch restaurant groups.

Rigid Monoliths

Single-store legacy systems lack native multi-tenancy and cross-branch data sync.

Waiter Bottlenecks

20–30 active waiters per branch hammering old databases causes severe peak-hour lag.

Zero Local Autonomy

Branch managers cannot adjust local menus or pricing without corporate bottlenecks.

Enter DineCore

Cloud-native multi-tenancy built for high-concurrency hospitality.

True Multi-Tenancy

Isolated branch environments with secure tenant context propagation.

Sub-Second Order Routing

WebSockets and Apache Kafka power instant KDS ticket updates.

Branch-Level Customization

Local pricing overrides and category management per restaurant location.

ARCHITECTURE STANDARD

"Engineered with Java 17+, Spring Boot 3.x, and Hibernate Filters for zero data leakage."

Optimized for 5–7 restaurant branches scaling effortlessly to hundreds.

Microservices Architecture

Modular Spring Cloud services ensuring high availability and fault isolation.

API Gateway

Spring Cloud Gateway handles JWT validation and tenant header injection.

Menu Service

Redis-backed catalog management with instant branch price overrides.

Order Service

High-concurrency table tracking and real-time WebSocket STOMP dispatch.

Billing Service

Atomic cheque generation, split billing, and shift Z-report compilation.

Tenant Isolation & Security

Automated tenant context flow from client request to database query.

- 1 Client sends request with header `X-Tenant-ID: branch_01`
- 2 API Gateway validates JWT and injects tenant context downstream
- 3 Hibernate Filter automatically applies `WHERE tenant_id = :currentTenant`

```
@Filter(name = "tenantFilter", condition = "tenant_id = :tenantId")
public abstract class TenantAuditableEntity {
    @Column(name = "tenant_id")
    private String tenantId;
    // Zero cross-tenant data leaks guaranteed
}
```

Market Opportunity

Rapid expansion in multi-location dining and cloud-native restaurant tech.

\$35B+

Global Restaurant Tech Market

Driven by rapid digitization across mid-market franchise groups.

Target ICP

Mid-market restaurant chains and multi-venue groups with 5 to 50+ locations.

The Wedge

Replacing legacy single-store POS with unified branch autonomy.

Monetization & Business Model

High-margin recurring SaaS combined with high-value operational modules.

Tiered Branch SaaS

Predictable monthly recurring revenue (MRR) charged per restaurant branch.

Advanced Analytics

Premium corporate reporting, multi-branch inventory tracking, and Z-report audits.

Payment Processing

Transaction fee take-rate on integrated payment gateways and split check options.

Product Roadmap & Milestones

Executing a clear timeline from core architecture to nationwide scale.

PHASE 1

Core Engine

Spring Boot microservices, Hibernate tenant filters, and WebSocket KDS setup.

PHASE 2

Pilot Rollout

Onboarding initial 5–7 restaurant branches for live sandbox validation and stress testing.

PHASE 3

Regional Scale

Expanding sales pipeline to regional hospitality franchise groups across multiple cities.

Competitive Advantage

Why DineCore outperforms legacy monoliths and single-store POS apps.

Legacy Systems

- ✗ Rigid single-store architecture
- ✗ High peak-hour database latency
- ✗ Manual corporate menu updates

DineCore Platform

- ✓ True native multi-tenancy
- ✓ Sub-second WebSocket order dispatch
- ✓ Autonomous local pricing control

The Ask & Use of Proceeds

Raising Seed Round to accelerate product hardening and pilot rollout.

SEED ROUND

\$1.5M

Fueling engineering scale and initial multi-branch onboarding.

Product Hardening & Backend Scaling

45%

Pilot Rollout (5–7 Restaurant Branches)

30%

Go-To-Market & Franchise Outreach

25%

The Long-Term Vision

Building the definitive multi-tenant operating system for global hospitality.

Enterprise Franchises

Scaling from regional groups to nationwide franchise networks with hundreds of tenants.

AI Demand Forecasting

Predictive kitchen prep and automated inventory restocking across branch clusters.

Thank You

Let's redefine multi-location hospitality infrastructure together.
